Package 'BBcor'

October 12, 2022

Type Package

Title Bayesian Bootstrapping Correlations

Version 1.0.3

Description Efficiently draw samples from the posterior distribution of various correlation coefficients with the Bayesian bootstrap described in Rubin (1981) <doi:10.1214/aos/1176345338>. There are six correlation coefficients, including Pearson, Kendall, Spearman, Gaussian Rank, Blomqvist, and polychoric.

Depends R (>= 4.0.0)

R topics documented:

`bbcor` *Bayesian Bootstrapping Correlations*

Description

Efficiently draws samples from the posterior distribution of various correlation coefficients

Usage

```
bbcor(x, method = "pearson", iter = 5000, cores = 2)
```

Arguments

`x`	A matrix of dimensions *n* by *p*
`method`	Character string. Which correlation coefficient should be computed. One of "pearson" (default), "kendall", "spearman", "polychoric", "gaussian_rank", or "blomqvist" (i.e., median correlation).
`iter`	Numeric. How many posterior samples (defaults to `5000`) ?
`cores`	Numeric. How many cores for parallel computing (defaults to `2`)?

Value

- `cor_mean`: A matrix including the posterior mean
- `samps`: An array of dimensions `p` by `b` by `iter` that includes the sampled correlation matrices.

Note

NAs are removed.

Examples

```
Y <- mtcars[,1:2]

bb_samps <- bbcor(Y, method = "spearman")
```

compare *Compare Bayesian bootstrapped correlations*

Description

See lin_comb

Usage

```
compare(lin_comb, obj, cred = 0.9, rope = NULL, contrast = NULL)
```

Arguments

lin_comb	A string specifying a linear combination of variables, or a list of variable names if using contrast.
obj	An object of class BGGM, bbcor, or a data.frame of posterior samples.
cred	The level for which a credible interval should be computed.
rope	Specify a ROPE. Optional.
contrast	A contrast matrix specifying which combinations to test. Optional.

Value

An object of class bayeslincom

Examples

```
Y <- mtcars[, 1:3]
bb <- bbcor(Y)
bb_compare <- compare("mpg--cyl > mpg--disp",
                      obj = bb,
                      cred = 0.90,
                      rope = c(-0.1, 0.1))
bb_compare
```

cor_2_pcor *Correlation to Partial Correlation*

Description

Convert correlations into the corresponding partial correlations.

Usage

```
cor_2_pcor(x, ...)
```

Arguments

x	An object of class bbcor
...	Currently ignored

- pcor_mean: A matrix including the posterior mean.
- samps: An array of dimensions p by b by iter that includes the sampled partial correlation matrices.

Examples

```
Y <- mtcars[,1:3]

fit <- bbcor(Y, method = "spearman")

cor_2_pcor(fit)
```

---

plot.bayeslincom *Plot comparisons from* compare

Description

See plot.bayeslincom

Usage

```
## S3 method for class 'bayeslincom'
plot(
  x,
  point_col = "black",
  hist_col = "black",
  hist_fill = "gray",
  bar_col = "steelblue",
  bins = 30,
  display_comb_strings = TRUE,
  ...
)
```

Arguments

x	An object of class bayeslincom
point_col	Color for point indicating mean of posterior
hist_col	Color for histogram edges
hist_fill	Color for histogram bars
bar_col	Color of bar for credible interval
bins	Number of bins

display_comb_strings
: If TRUE, displays full strings for combinations in ggplot facets when there is more than one combination in x

...
: Currently ignored

Value

An object of class ggplot

Examples

```
Y <- mtcars[, 1:3]
bb <- bbcor(Y)
bb_compare <- compare("mpg--cyl > mpg--disp",
                      obj = bb,
                      cred = 0.90,
                      rope = c(-0.1, 0.1))
plot(bb_compare)
```

---

plot.bbcor *Plot bbcor point estimates and intervals*

Description

Plot bbcor point estimates and intervals

Usage

```
## S3 method for class 'bbcor'
plot(x, ci = 0.9, point_col = "red", bar_col = "black", ...)
```

Arguments

x	An object of class bbcor
ci	Width of credible interval. Defaults to 0.9.
point_col	Color for point indicating mean of posterior
bar_col	Color of bar for credible interval
...	Currently ignored

Value

An object of class ggplot

Examples

```
Y <- mtcars[, 1:5]
bb <- bbcor(Y)
plot(bb)
```

posterior_samples *Extract Posterior Samples*

Description

Extract Posterior Samples

Usage

```
posterior_samples(object, ...)
```

Arguments

object	An object of class bbcor
...	Currently ignored

Value

A data frame including the posterior samples

Examples

```
Y <- mtcars[,1:5]

bb_samps <- bbcor(Y, method = "spearman")

# correlations
posterior_samples(bb_samps)

# partial correlations
posterior_samples(cor_2_pcor(bb_samps))
```

print.bayeslincom *Print formatted summary of a* bayeslincom *object*

Description

Print formatted summary of a bayeslincom object

Usage

```
## S3 method for class 'bayeslincom'
print(x, decimals = 2, ...)
```

Arguments

x	An object of class bayeslincom
decimals	The number of decimals points to which estimates should be rounded
...	Other arguments to be passed to print

Value

A formatted summary of posterior samples

---

print.bbcor *Print* bbcor *Objects*

Description

Print the correlation or partial correlation matrix

Usage

```
## S3 method for class 'bbcor'
print(x, ...)
```

Arguments

x	An object of class bbcor
...	Currently ignored

---

srol2021 *Data on the social consequences of COVID-19 conspiracy beliefs*

Description

Data from Study 1 in (Å rol et al. 2021) examining effects of prejudice and descrimination on COVID-19 conspiracy beliefs

Usage

```
data("srol2021")
```

Format

A data frame with 501 rows and 24 variables

- `id`: participant id
- `gender`: participants' indicated gender (1 = "male", 2 = "female")
- `age`: participants' indicated age
- `education`: participants' indicated highest attained education level(1 = "elementary education", 2 = "high school without diploma", 3 = "high school with diploma", 4 = "undergraduate college degree", 5 = "graduate college degree", 6 = "doctoral degree")
- `combined_covid_conspiracy`: average rating on 12 items of both generic and China-specific COVID-19 conspiracy beliefs
- `china_covid_conspiracy`: average rating on 4 items of China-specific COVID-19 conspiracy beliefs
- `generic_covid_conspiracy`: average rating on 8 items of generic COVID-19 conspiracy beliefs
- `generic_covid_conspiracy_wo_hoax`: average rating on 7 items of generic COVID-19 conspiracy beliefs (without the hoax theory item)
- `combined_covid_conspiracy_wo_hoax`: average rating on 11 items of both generic and China-specific COVID-19 conspiracy beliefs (without the hoax theory item)
- `neg_feelings_italy`:score on a feeling thermometer (higher score = more negative feelings) toward Italian people/ 0-100
- `neg_feelings_china`:score on a feeling thermometer (higher score = more negative feelings) toward Chinese people/ 0-100
- `neg_feelings_roma`: score on a feeling thermometer (higher score = more negative feelings) toward Roma people/ 0-100
- `social_distance_italy`: average rating on three items of social distance toward Italian people
- `social_distance_china`: average rating on three items of social distance toward Chinese people
- `social_distance_roma`: average rating on three items of social distance toward Roma people
- `discrimination_italy`: rating on one discrimination item for Italian people
- `discrimination_china`: rating on one discrimination item for Chinese people
- `discrimination_roma`: rating on one discrimination item for Roma people
- `italy_composite`: composite average of 5 z-scores (feeling thermometer, 3 social distance items, and discrimination) for Italian people
- `china_composite`: composite average of 5 z-scores (feeling thermometer, 3 social distance items, and discrimination) for Chinese people
- `roma_composite`: composite average of 5 z-scores (feeling thermometer, 3 social distance items, and discrimination) for Roma people
- `information_exposure`: average rating on the 3 items of exposure to information about COVID-19 pandemic
- `anxiety`: average rating on the 4 items related to feelings of anxiety]
- `lack_of_control`: average rating on the 4 items related to the feeling of lack of control

`summary.bbcor` *Summarize posterior samples from bbcor object*

Description

Summarize posterior samples from bbcor object

Usage

```
## S3 method for class 'bbcor'
summary(object, ci = 0.9, decimals = 2, ...)
```

Arguments

`object`	An object of class `bbcor`
`ci`	The desired credible interval
`decimals`	The number of decimals points to which estimates should be rounded
`...`	Currently ignored

Value

A `data.frame` summarizing the relations

Examples

```
Y <- mtcars[, 1:5]
bb <- bbcor(Y, method = "spearman")

summary(bb)
```
