

Package ‘LRTesteR’

October 12, 2022

Title Likelihood Ratio Tests and Confidence Intervals

Version 1.0.1

Author Greg McMahan

Maintainer Greg McMahan <gmcmacran@gmail.com>

Description A collection of hypothesis tests and confidence intervals based on the likelihood ratio
<https://en.wikipedia.org/wiki/Likelihood-ratio_test>.

--------------	-----------

beta_shape1_one_sample

Test the shape1 parameter of a beta distribution.

Description

Test the shape1 parameter of a beta distribution.

Usage

```
beta_shape1_one_sample(x, shape1, alternative = "two.sided", conf.level = 0.95)
```

Arguments

x	a numeric vector of at least 50 data values.
shape1	a number indicating the tested value of the shape1 parameter.
alternative	a character string specifying the alternative hypothesis, must be one of "two.sided" (default), "greater" or "less".
conf.level	confidence level of the likelihood interval.

Value

An S3 class containing the test statistic, p value, likelihood based confidence interval, and alternative hypothesis.

Source

- https://en.wikipedia.org/wiki/Likelihood-ratio_test
- Yudi Pawitan. In All Likelihood. Oxford University Press.
- Hogg, McKean, and Craig. Introduction to Mathematical Statistics. Pearson.

Examples

```
library(LRTesteR)

# Null is true
set.seed(1)
x <- rbeta(100, shape1 = 1, shape2 = 2)
beta_shape1_one_sample(x, 1, "two.sided")

# Null is false
set.seed(1)
x <- rbeta(100, shape1 = 3, shape2 = 2)
beta_shape1_one_sample(x, 1, "greater")
```

beta_shape1_one_way *Test the equality of shape 1 parameters of beta distributions.*

Description

Test the equality of shape 1 parameters of beta distributions.

Usage

```
beta_shape1_one_way(x, fctr, conf.level = 0.95)
```

Arguments

- | | |
|-------------------------|---|
| <code>x</code> | a numeric vector of at least 50 data values per group. |
| <code>fctr</code> | a factor vector indicating groups. |
| <code>conf.level</code> | overall confidence level of the likelihood intervals. Uses Bonferroni correction. |

Details

- Null: All shape1s are equal. ($\text{shape1_1} = \text{shape1_2} \dots \text{shape1_k}$).
- Alternative: At least one shape1 is not equal.

Value

An S3 class containing the test statistic, p value, list of likelihood based confidence intervals, overall confidence level, individual confidence level of each interval and alternative hypothesis.

Source

- https://en.wikipedia.org/wiki/Likelihood-ratio_test
- Yudi Pawitan. In All Likelihood. Oxford University Press.
- Hogg, McKean, and Craig. Introduction to Mathematical Statistics. Pearson.

Examples

```
library(LRTesteR)

# Null is true
set.seed(1)
x <- rbeta(150, 1, 2)
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
beta_shape1_one_way(x, fctr, .95)

# Null is false
set.seed(1)
x <- c(rbeta(50, 1, 2), rbeta(50, 2, 2), rbeta(50, 3, 2))
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
beta_shape1_one_way(x, fctr, .95)
```

beta_shape2_one_sample

Test the shape2 parameter of a beta distribution.

Description

Test the shape2 parameter of a beta distribution.

Usage

```
beta_shape2_one_sample(x, shape2, alternative = "two.sided", conf.level = 0.95)
```

Arguments

x	a numeric vector of at least 50 data values.
shape2	a number indicating the tested value of the shape2 parameter.
alternative	a character string specifying the alternative hypothesis, must be one of "two.sided" (default), "greater" or "less".
conf.level	confidence level of the likelihood interval.

Value

An S3 class containing the test statistic, p value, likelihood based confidence interval, and alternative hypothesis.

Source

- https://en.wikipedia.org/wiki/Likelihood-ratio_test
- Yudi Pawitan. In All Likelihood. Oxford University Press.

Examples

```
library(LRTesteR)

# Null is true
set.seed(1)
x <- rbeta(100, shape1 = 1, shape2 = 1)
beta_shape2_one_sample(x, 1, "two.sided")

# Null is false
set.seed(1)
x <- rbeta(100, shape1 = 1, shape2 = 3)
beta_shape2_one_sample(x, 1, "greater")
```

beta_shape2_one_way *Test the equality of shape 2 parameters of beta distributions.*

Description

Test the equality of shape 2 parameters of beta distributions.

Usage

```
beta_shape2_one_way(x, fctr, conf.level = 0.95)
```

Arguments

- | | |
|-------------------------|---|
| <code>x</code> | a numeric vector of at least 50 data values per group. |
| <code>fctr</code> | a factor vector indicating groups. |
| <code>conf.level</code> | overall confidence level of the likelihood intervals. Uses Bonferroni correction. |

Details

- Null: All shape2s are equal. ($\text{shape2_1} = \text{shape2_2} \dots \text{shape2_k}$).
- Alternative: At least one shape2 is not equal.

Value

An S3 class containing the test statistic, p value, list of likelihood based confidence intervals, overall confidence level, individual confidence level of each interval and alternative hypothesis.

Examples

```
library(LRTesteR)

# Null is true
set.seed(1)
x <- rbeta(150, 2, 2)
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
beta_shape2_one_way(x, fctr, .95)

# Null is false
set.seed(1)
x <- c(rbeta(50, 2, 1), rbeta(50, 2, 2), rbeta(50, 2, 3))
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
beta_shape2_one_way(x, fctr, .95)
```

binomial_p_one_sample *Test the p parameter of a binomial distribution.*

Description

Test the p parameter of a binomial distribution.

Usage

```
binomial_p_one_sample(x, n, p, alternative = "two.sided", conf.level = 0.95)
```

Arguments

x	Number of successes.
n	Number of trials.
p	Hypothesized probability of success.
alternative	a character string specifying the alternative hypothesis, must be one of "two.sided" (default), "greater" or "less".
conf.level	confidence level of the likelihood interval.

Value

An S3 class containing the test statistic, p value, likelihood based confidence interval, and alternative hypothesis.

Source

- https://en.wikipedia.org/wiki/Likelihood-ratio_test
- Yudi Pawitan. In All Likelihood. Oxford University Press.
- Hogg, McKean, and Craig. Introduction to Mathematical Statistics. Pearson.

Examples

```
library(LRTesteR)

# Null is true. 52 successes. 100 trials
binomial_p_one_sample(52, 100, .50, "two.sided")

# Null is false. 75 successes. 100 trials
binomial_p_one_sample(75, 100, .50, "two.sided")
```

binomial_p_one_way *Test the equality of p parameters of binomial distributions.*

Description

Test the equality of p parameters of binomial distributions.

Usage

```
binomial_p_one_way(x, n, fctr, conf.level = 0.95)
```

Arguments

x	a numeric vector indicating number of successes per group.
n	a numeric vector indicating number of attempts per group.
fctr	a factor vector indicating groups.
conf.level	overall confidence level of the likelihood intervals. Uses Bonferroni correction.

Value

An S3 class containing the test statistic, p value, list of likelihood based confidence intervals, overall confidence level, individual confidence level of each interval and alternative hypothesis.

Source

- https://en.wikipedia.org/wiki/Likelihood-ratio_test
- Yudi Pawitan. In All Likelihood. Oxford University Press.
- Hogg, McKean, and Craig. Introduction to Mathematical Statistics. Pearson.

Examples

```
library(LRTesteR)

# Null is true.
set.seed(1)
x <- rbinom(3, 50, .5)
n <- rep(50, length(x))
fctr <- factor(1:length(x))
binomial_p_one_way(x, n, fctr, .95)

# Null is false
set.seed(1)
x <- rbinom(3, 50, c(.25, .50, .75))
n <- rep(50, length(x))
fctr <- factor(1:length(x))
binomial_p_one_way(x, n, fctr, .95)
```

cauchy_location_one_sample

Test the location parameter of a cauchy distribution.

Description

Test the location parameter of a cauchy distribution.

Usage

```
cauchy_location_one_sample(
  x,
  location,
  alternative = "two.sided",
  conf.level = 0.95
)
```

Arguments

x	a numeric vector of at least 50 data values.
location	a number indicating the tested value of the location parameter.
alternative	a character string specifying the alternative hypothesis, must be one of "two.sided" (default), "greater" or "less".
conf.level	confidence level of the likelihood interval.

Value

An S3 class containing the test statistic, p value, likelihood based confidence interval, and alternative hypothesis.

Source

- https://en.wikipedia.org/wiki/Likelihood-ratio_test
- Yudi Pawitan. In All Likelihood. Oxford University Press.
- Hogg, McKean, and Craig. Introduction to Mathematical Statistics. Pearson.

Examples

```
library(LRTesteR)

# Null is true
set.seed(1)
x <- rcauchy(n = 100, location = 1, scale = 2)
cauchy_location_one_sample(x, 1, "two.sided")

# Null is false
set.seed(1)
x <- rcauchy(n = 100, location = 3, scale = 2)
cauchy_location_one_sample(x, 1, "greater")
```

cauchy_location_one_way

Test the equality of location parameters of cauchy distributions.

Description

Test the equality of location parameters of cauchy distributions.

Usage

```
cauchy_location_one_way(x, fctr, conf.level = 0.95)
```

Arguments

- | | |
|------------|---|
| x | a numeric vector of at least 50 data values per group. |
| fctr | a factor vector indicating groups. |
| conf.level | overall confidence level of the likelihood intervals. Uses Bonferroni correction. |

Details

- All locations are equal. (location_1 = location_2 ... location_k).
- Alternative: At least one location is not equal.

Value

An S3 class containing the test statistic, p value, list of likelihood based confidence intervals, overall confidence level, individual confidence level of each interval and alternative hypothesis.

Source

- https://en.wikipedia.org/wiki/Likelihood-ratio_test
- Yudi Pawitan. In All Likelihood. Oxford University Press.

Examples

```
library(LRTesteR)

# Null is true
set.seed(1)
x <- rcauchy(n = 150, location = 1, scale = 2)
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
cauchy_location_one_way(x, fctr, .95)

# Null is false
set.seed(1)
x <- c(rcauchy(50, 1, 2), rcauchy(50, 2, 2), rcauchy(50, 3, 2))
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
cauchy_location_one_way(x, fctr, .95)
```

cauchy_scale_one_sample

Test the scale parameter of a cauchy distribution.

Description

Test the scale parameter of a cauchy distribution.

Usage

```
cauchy_scale_one_sample(x, scale, alternative = "two.sided", conf.level = 0.95)
```

Arguments

x	a numeric vector of at least 50 data values.
scale	a number indicating the tested value of the scale parameter.
alternative	a character string specifying the alternative hypothesis, must be one of "two.sided" (default), "greater" or "less".
conf.level	confidence level of the likelihood interval.

Value

An S3 class containing the test statistic, p value, likelihood based confidence interval, and alternative hypothesis.

Source

- https://en.wikipedia.org/wiki/Likelihood-ratio_test
- Yudi Pawitan. In All Likelihood. Oxford University Press.

Examples

```
library(LRTesteR)

# Null is true
set.seed(1)
x <- rcauchy(n = 100, location = 1, scale = 2)
cauchy_scale_one_sample(x, 2, "two.sided")

# Null is false
set.seed(1)
x <- rcauchy(n = 100, location = 3, scale = 2)
cauchy_scale_one_sample(x, 1, "greater")
```

cauchy_scale_one_way *Test the equality of scale parameters of cauchy distributions.*

Description

Test the equality of scale parameters of cauchy distributions.

Usage

```
cauchy_scale_one_way(x, fctr, conf.level = 0.95)
```

Arguments

x	a numeric vector of at least 50 data values per group.
fctr	a factor vector indicating groups.
conf.level	overall confidence level of the likelihood intervals. Uses Bonferroni correction.

Details

- Null: All scales are equal. (scale_1 = scale_2 ... scale_k).
- Alternative: At least one scale is not equal.

Value

An S3 class containing the test statistic, p value, list of likelihood based confidence intervals, overall confidence level, individual confidence level of each interval and alternative hypothesis.

Source

Examples

```
library(LRTesteR)

# Null is true
set.seed(1)
x <- rcauchy(n = 150, 1, 2)
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
cauchy_scale_one_way(x, fctr, .95)

# Null is false
set.seed(1)
x <- c(rcauchy(50, 2, 1), rcauchy(50, 2, 2), rcauchy(50, 2, 3))
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
cauchy_scale_one_way(x, fctr, .95)
```

exponential_rate_one_sample

Test the rate parameter of a exponential distribution.

Description

Test the rate parameter of a exponential distribution.

Usage

```
exponential_rate_one_sample(
  x,
  rate,
  alternative = "two.sided",
  conf.level = 0.95
)
```

Arguments

x	a numeric vector of at least 50 data values.
rate	a number indicating the tested value of rate.
alternative	a character string specifying the alternative hypothesis, must be one of "two.sided" (default), "greater" or "less".
conf.level	confidence level of the likelihood interval.

Value

An S3 class containing the test statistic, p value, likelihood based confidence interval, and alternative hypothesis.

Source

- https://en.wikipedia.org/wiki/Likelihood-ratio_test
- Yudi Pawitan. In All Likelihood. Oxford University Press.
- Hogg, McKean, and Craig. Introduction to Mathematical Statistics. Pearson.

Examples

```
library(LRTeser)

# Null is true
set.seed(1)
x <- rexp(100, 1)
exponential_rate_one_sample(x, 1, "two.sided")

# Null is false
set.seed(1)
x <- rexp(100, 3)
exponential_rate_one_sample(x, 1, "greater")
```

exponential_rate_one_way

Test the equality of rate parameters of exponential distributions.

Description

Test the equality of rate parameters of exponential distributions.

Usage

```
exponential_rate_one_way(x, fctr, conf.level = 0.95)
```

Arguments

- | | |
|------------|---|
| x | a numeric vector of at least 50 data values per group. |
| fctr | a factor vector indicating groups. |
| conf.level | overall confidence level of the likelihood intervals. Uses Bonferroni correction. |

Details

- Null: All lambdas are equal. ($\lambda_1 = \lambda_2 \dots \lambda_k$).
- Alternative: At least one lambda is not equal.

Value

An S3 class containing the test statistic, p value, list of likelihood based confidence intervals, overall confidence level, individual confidence level of each interval and alternative hypothesis.

Source

- https://en.wikipedia.org/wiki/Likelihood-ratio_test
- Yudi Pawitan. In All Likelihood. Oxford University Press.
- Hogg, McKean, and Craig. Introduction to Mathematical Statistics. Pearson.

Examples

```
library(LRTeser)

# Null is true
set.seed(1)
x <- rexp(150, 1)
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
exponential_rate_one_way(x, fctr, .95)

# Null is false
set.seed(1)
x <- c(rexp(50, 1), rexp(50, 2), rexp(50, 3))
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
exponential_rate_one_way(x, fctr, .95)
```

`gamma_rate_one_sample` *Test the rate parameter of a gamma distribution.*

Description

Test the rate parameter of a gamma distribution.

Usage

```
gamma_rate_one_sample(x, rate, alternative = "two.sided", conf.level = 0.95)
```

Arguments

<code>x</code>	a numeric vector of at least 50 data values.
<code>rate</code>	a number indicating the tested value of the rate parameter.
<code>alternative</code>	a character string specifying the alternative hypothesis, must be one of "two.sided" (default), "greater" or "less".
<code>conf.level</code>	confidence level of the likelihood interval.

Value

An S3 class containing the test statistic, p value, likelihood based confidence interval, and alternative hypothesis.

Source

- https://en.wikipedia.org/wiki/Likelihood-ratio_test
- Yudi Pawitan. In All Likelihood. Oxford University Press.
- Hogg, McKean, and Craig. Introduction to Mathematical Statistics. Pearson.

Examples

```
library(LRTesteR)

# Null is true
set.seed(1)
x <- rgamma(100, shape = 1, rate = 1)
gamma_rate_one_sample(x, 1, "two.sided")

# Null is false
set.seed(1)
x <- rgamma(100, shape = 1, rate = 2)
gamma_rate_one_sample(x, 1, "greater")
```

gamma_rate_one_way *Test the equality of rate parameters of gamma distributions.*

Description

Test the equality of rate parameters of gamma distributions.

Usage

```
gamma_rate_one_way(x, fctr, conf.level = 0.95)
```

Arguments

- | | |
|------------|---|
| x | a numeric vector of at least 50 data values per group. |
| fctr | a factor vector indicating groups. |
| conf.level | overall confidence level of the likelihood intervals. Uses Bonferroni correction. |

Details

- Null: All rates are equal. (rate_1 = rate_2 ... rate_k).
- Alternative: At least one rate is not equal.

Value

An S3 class containing the test statistic, p value, list of likelihood based confidence intervals, overall confidence level, individual confidence level of each interval and alternative hypothesis.

Examples

```
library(LRTesteR)

# Null is true
set.seed(1)
x <- rgamma(150, 1, 2)
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
gamma_rate_one_way(x, fctr, .95)

# Null is false
set.seed(1)
x <- c(rgamma(50, 2, 1), rgamma(50, 2, 2), rgamma(50, 2, 3))
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
gamma_rate_one_way(x, fctr, .95)
```

gamma_scale_one_sample

Test the scale parameter of a gamma distribution.

Description

Test the scale parameter of a gamma distribution.

Usage

```
gamma_scale_one_sample(x, scale, alternative = "two.sided", conf.level = 0.95)
```

Arguments

x	a numeric vector of at least 50 data values.
scale	a number indicating the tested value of the scale parameter.
alternative	a character string specifying the alternative hypothesis, must be one of "two.sided" (default), "greater" or "less".
conf.level	confidence level of the likelihood interval.

Value

An S3 class containing the test statistic, p value, likelihood based confidence interval, and alternative hypothesis.

```
library(LRTesteR)

# Null is true
set.seed(1)
x <- rgamma(100, shape = 1, scale = 2)
gamma_scale_one_sample(x, 2, "two.sided")

# Null is false
set.seed(1)
x <- rgamma(100, shape = 1, scale = 2)
gamma_scale_one_sample(x, 1, "greater")
```

gamma_scale_one_way *Test the equality of scale parameters of gamma distributions.*

Description

Test the equality of scale parameters of gamma distributions.

Usage

```
gamma_scale_one_way(x, fctr, conf.level = 0.95)
```

Arguments

- | | |
|------------|---|
| x | a numeric vector of at least 50 data values per group. |
| fctr | a factor vector indicating groups. |
| conf.level | overall confidence level of the likelihood intervals. Uses Bonferroni correction. |

Details

- Null: Null: All scales are equal. ($\text{scale_1} = \text{scale_2} \dots \text{scale_k}$).
- Alternative: At least one scale is not equal.

Value

An S3 class containing the test statistic, p value, list of likelihood based confidence intervals, overall confidence level, individual confidence level of each interval and alternative hypothesis.

# Null is true
set.seed(1)
x <- rgamma(150, 1, scale = 2)
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
gamma_scale_one_way(x, fctr, .95)

# Null is false
set.seed(1)
x <- c(rgamma(50, 2, scale = 1), rgamma(50, 2, scale = 2), rgamma(50, 2, scale = 3))
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
gamma_scale_one_way(x, fctr, .95)
```

gamma_shape_one_sample

Test the shape parameter of a gamma distribution.

Description

Test the shape parameter of a gamma distribution.

Usage

```
gamma_shape_one_sample(x, shape, alternative = "two.sided", conf.level = 0.95)
```

Arguments

x	a numeric vector of at least 50 data values.
shape	a number indicating the tested value of the shape parameter.
alternative	a character string specifying the alternative hypothesis, must be one of "two.sided" (default), "greater" or "less".
conf.level	confidence level of the likelihood interval.

Value

An S3 class containing the test statistic, p value, likelihood based confidence interval, and alternative hypothesis.

Examples

```
library(LRTesteR)

# Null is true
set.seed(1)
x <- rgamma(100, shape = 1, scale = 2)
gamma_shape_one_sample(x, 1, "two.sided")

# Null is false
set.seed(1)
x <- rgamma(100, shape = 3, scale = 2)
gamma_shape_one_sample(x, 1, "greater")
```

gamma_shape_one_way *Test the equality of shape parameters of gamma distributions.*

Description

Test the equality of shape parameters of gamma distributions.

Usage

```
gamma_shape_one_way(x, fctr, conf.level = 0.95)
```

Arguments

- | | |
|-------------------------|---|
| <code>x</code> | a numeric vector of at least 50 data values per group. |
| <code>fctr</code> | a factor vector indicating groups. |
| <code>conf.level</code> | overall confidence level of the likelihood intervals. Uses Bonferroni correction. |

Details

- Null: All shapes are equal. (`shape_1 = shape_2 ... shape_k`).
- Alternative: At least one shape is not equal.

Value

An S3 class containing the test statistic, p value, list of likelihood based confidence intervals, overall confidence level, individual confidence level of each interval and alternative hypothesis.

Examples

```
library(LRTesteR)

# Null is true
set.seed(1)
x <- rgamma(150, 2, 2)
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
gamma_shape_one_way(x, fctr, .95)

# Null is false
set.seed(1)
x <- c(rgamma(50, 1, 2), rgamma(50, 2, 2), rgamma(50, 3, 2))
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
gamma_shape_one_way(x, fctr, .95)
```

gaussian_mu_one_sample

Test the mean of a gaussian distribution.

Description

Test the mean of a gaussian distribution.

Usage

```
gaussian_mu_one_sample(x, mu, alternative = "two.sided", conf.level = 0.95)
```

Arguments

x	a numeric vector of at least 50 data values.
mu	a number indicating the tested value of mu.
alternative	a character string specifying the alternative hypothesis, must be one of "two.sided" (default), "greater" or "less".
conf.level	confidence level of the likelihood interval.

Value

An S3 class containing the test statistic, p value, likelihood based confidence interval, and alternative hypothesis.

Source

- Hogg, McKean, and Craig. Introduction to Mathematical Statistics. Pearson.

Examples

```
library(LRTesteR)

# Null is true
set.seed(1)
x <- rnorm(100, 0, 1)
gaussian_mu_one_sample(x, 0, "two.sided")

# Null is false
set.seed(1)
x <- rnorm(100, 3, 1)
gaussian_mu_one_sample(x, 0, "greater")
```

gaussian_mu_one_way *Test the equality of means of gaussian distributions.*

Description

Test the equality of means of gaussian distributions.

Usage

```
gaussian_mu_one_way(x, fctr, conf.level = 0.95)
```

Arguments

- | | |
|-------------------------|---|
| <code>x</code> | a numeric vector of at least 50 data values per group. |
| <code>fctr</code> | a factor vector indicating groups. |
| <code>conf.level</code> | overall confidence level of the likelihood intervals. Uses Bonferroni correction. |

Details

- Null: All mus are equal. ($\mu_1 = \mu_2 \dots \mu_k$).
- Alternative: At least one mu is not equal.

Value

An S3 class containing the test statistic, p value, list of likelihood based confidence intervals, overall confidence level, individual confidence level of each interval and alternative hypothesis.

Examples

```
library(LRTesteR)

# Null is true
set.seed(1)
x <- rnorm(150, 1, 1)
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
gaussian_mu_one_way(x, fctr, .95)

# Null is false
set.seed(1)
x <- c(rnorm(50, 1, 1), rnorm(50, 2, 1), rnorm(50, 3, 1))
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
gaussian_mu_one_way(x, fctr, .95)
```

gaussian_variance_one_sample

Test the variance of a gaussian distribution.

Description

Test the variance of a gaussian distribution.

Usage

```
gaussian_variance_one_sample(
  x,
  sigma.squared,
  alternative = "two.sided",
  conf.level = 0.95
)
```

Arguments

<code>x</code>	a numeric vector of at least 50 data values.
<code>sigma.squared</code>	a number indicating the tested value of sigma squared.
<code>alternative</code>	a character string specifying the alternative hypothesis, must be one of "two.sided" (default), "greater" or "less".
<code>conf.level</code>	confidence level of the likelihood interval.

Value

An S3 class containing the test statistic, p value, likelihood based confidence interval, and alternative hypothesis.

Examples

```
library(LRTesteR)

# Null is true
set.seed(1)
x <- rnorm(100, 0, 1)
gaussian_variance_one_sample(x, 1, "two.sided")

# Null is false
set.seed(1)
x <- rnorm(100, 0, 2)
gaussian_variance_one_sample(x, 1, "greater")
```

gaussian_variance_one_way

Test the equality of variance parameters of gaussian distributions.

Description

Test the equality of variance parameters of gaussian distributions.

Usage

```
gaussian_variance_one_way(x, fctr, conf.level = 0.95)
```

Arguments

x	a numeric vector of at least 50 data values per group.
fctr	a factor vector indicating groups.
conf.level	overall confidence level of the likelihood intervals. Uses Bonferroni correction.

Details

- Null: All variances are equal. ($\sigma^2_1 = \sigma^2_2 = \dots = \sigma^2_k$).
- Alternative: At least one variance is not equal.

Value

An S3 class containing the test statistic, p value, list of likelihood based confidence intervals, overall confidence level, individual confidence level of each interval and alternative hypothesis.

```
library(LRTesteR)

# Null is true
set.seed(1)
x <- rnorm(150, 1, 1)
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
gaussian_variance_one_way(x, fctr, .95)

# Null is false
set.seed(1)
x <- c(rnorm(50, 1, 1), rnorm(50, 1, 2), rnorm(50, 1, 3))
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
gaussian_variance_one_way(x, fctr, .95)
```

inverse_gaussian_dispersion_one_sample

Test the dispersion parameter of an inverse gaussian distribution.

Description

Test the dispersion parameter of an inverse gaussian distribution.

Usage

```
inverse_gaussian_dispersion_one_sample(
  x,
  dispersion,
  alternative = "two.sided",
  conf.level = 0.95
)
```

Arguments

<code>x</code>	a numeric vector of at least 50 data values.
<code>dispersion</code>	a number indicating the tested value of the dispersion parameter.
<code>alternative</code>	a character string specifying the alternative hypothesis, must be one of "two.sided" (default), "greater" or "less".
<code>conf.level</code>	confidence level of the likelihood interval.

Value

An S3 class containing the test statistic, p value, likelihood based confidence interval, and alternative hypothesis.

Examples

```
library(LRTesteR)
library(statmod)

# Null is true
set.seed(1)
x <- rinvgauss(n = 100, mean = 1, dispersion = 2)
inverse_gaussian_dispersion_one_sample(x, 2, "two.sided")

# Null is false
set.seed(1)
x <- rinvgauss(n = 100, mean = 1, dispersion = 2)
inverse_gaussian_dispersion_one_sample(x, 1, "greater")
```

```
inverse_gaussian_dispersion_one_way
```

Test the equality of dispersion parameters of inverse gaussian distributions.

Description

Test the equality of dispersion parameters of inverse gaussian distributions.

Usage

```
inverse_gaussian_dispersion_one_way(x, fctr, conf.level = 0.95)
```

Arguments

- | | |
|-------------------------|---|
| <code>x</code> | a numeric vector of at least 50 data values per group. |
| <code>fctr</code> | a factor vector indicating groups. |
| <code>conf.level</code> | overall confidence level of the likelihood intervals. Uses Bonferroni correction. |

Details

- Null: All dispersion parameters are equal. (`dispersion_1 = dispersion_2 ... dispersion_k`).
- Alternative: At least one dispersion is not equal.

Value

An S3 class containing the test statistic, p value, list of likelihood based confidence intervals, overall confidence level, individual confidence level of each interval and alternative hypothesis.

# Null is false
set.seed(1)
x <- rinvgauss(n = 100, mean = 3, shape = 2)
inverse_gaussian_mu_one_sample(x, 1, "greater")
```

inverse_gaussian_mu_one_way

Test the equality of means of inverse gaussian distributions.

Description

Test the equality of means of inverse gaussian distributions.

Usage

```
inverse_gaussian_mu_one_way(x, fctr, conf.level = 0.95)
```

Arguments

- x a numeric vector of at least 50 data values per group.
- fctr a factor vector indicating groups.
- conf.level overall confidence level of the likelihood intervals. Uses Bonferroni correction.

Details

- Null: All mus are equal. ($\mu_1 = \mu_2 \dots \mu_k$).
- Alternative: At least one mu is not equal.

Value

An S3 class containing the test statistic, p value, list of likelihood based confidence intervals, overall confidence level, individual confidence level of each interval and alternative hypothesis.

inverse_gaussian_mu_one_way(x, fctr, .95)

```

inverse_gaussian_shape_one_sample

Test the shape parameter of an inverse gaussian distribution.

Description

Test the shape parameter of an inverse gaussian distribution.

Usage

```
inverse_gaussian_shape_one_sample(
  x,
  shape,
  alternative = "two.sided",
  conf.level = 0.95
)
```

Arguments

x	a numeric vector of at least 50 data values.
shape	a number indicating the tested value of the shape parameter.
alternative	a character string specifying the alternative hypothesis, must be one of "two.sided" (default), "greater" or "less".
conf.level	confidence level of the likelihood interval.

Value

An S3 class containing the test statistic, p value, likelihood based confidence interval, and alternative hypothesis.

fctr <- factor(fctr, levels = c("1", "2", "3"))
inverse_gaussian_shape_one_way(x, fctr, .95)
```

negative_binomial_p_one_sample

Test the p parameter of a negative binomial distribution.

Description

Test the p parameter of a negative binomial distribution.

Usage

```
negative_binomial_p_one_sample(
  num_failures,
  num_successes,
  p,
  alternative = "two.sided",
```

```
conf.level = 0.95
)
```

Arguments

num_failures	Number of failures.
num_successes	Number of successes.
p	Hypothesized probability of success.
alternative	a character string specifying the alternative hypothesis, must be one of "two.sided" (default), "greater" or "less".
conf.level	confidence level of the likelihood interval.

Value

An S3 class containing the test statistic, p value, likelihood based confidence interval, and alternative hypothesis.

Source

- https://en.wikipedia.org/wiki/Likelihood-ratio_test
- Yudi Pawitan. In All Likelihood. Oxford University Press.
- Hogg, McKean, and Craig. Introduction to Mathematical Statistics. Pearson.

Examples

```
library(LRTesteR)

# Null is true. 48 failures before 52 successes.
negative_binomial_p_one_sample(48, 52, .50, "two.sided")

# Null is false. 25 failures before 75 successes.
negative_binomial_p_one_sample(25, 75, .50, "two.sided")
```

negative_binomial_p_one_way

Test the equality of p parameters of negative binomial distributions.

Description

Test the equality of p parameters of negative binomial distributions.

Usage

```
negative_binomial_p_one_way(
  num_failures,
  num_successes,
  fctr,
  conf.level = 0.95
)
```

Arguments

<code>num_failures</code>	a numeric vector indicating number of failures per group.
<code>num_successes</code>	a numeric vector indicating number of successes per group.
<code>fctr</code>	a factor vector indicating groups.
<code>conf.level</code>	overall confidence level of the likelihood intervals. Uses Bonferroni correction.

Value

An S3 class containing the test statistic, p value, list of likelihood based confidence intervals, overall confidence level, individual confidence level of each interval and alternative hypothesis.

Source

- https://en.wikipedia.org/wiki/Likelihood-ratio_test
- Yudi Pawitan. In All Likelihood. Oxford University Press.
- Hogg, McKean, and Craig. Introduction to Mathematical Statistics. Pearson.

Examples

```
library(LRTesteR)

# Null is true.
set.seed(1)
num_failures <- rnbinom(3, 50, .5)
num_successes <- rep(50, length(num_failures))
fctr <- factor(1:length(num_failures))
negative_binomial_p_one_way(num_failures, num_successes, fctr, .95)

# Null is false
set.seed(1)
num_failures <- rnbinom(3, 50, c(.25, .50, .75))
num_successes <- rep(50, length(num_failures))
fctr <- factor(1:length(num_failures))
negative_binomial_p_one_way(num_failures, num_successes, fctr, .95)
```

poisson_lambda_one_sample

Test the lambda parameter of a poisson distribution.

Description

Test the lambda parameter of a poisson distribution.

Usage

```
poisson_lambda_one_sample(
  x,
  lambda,
  alternative = "two.sided",
  conf.level = 0.95
)
```

Arguments

<code>x</code>	a numeric vector of at least 50 data values.
<code>lambda</code>	a number indicating the tested value of lambda
<code>alternative</code>	a character string specifying the alternative hypothesis, must be one of "two.sided" (default), "greater" or "less".
<code>conf.level</code>	confidence level of the likelihood interval.

Value

An S3 class containing the test statistic, p value, likelihood based confidence interval, and alternative hypothesis.

Source

- https://en.wikipedia.org/wiki/Likelihood-ratio_test
- Yudi Pawitan. In All Likelihood. Oxford University Press.
- Hodd, McKean, and Craig. Introduction to Mathematical Statistics. Pearson.

Examples

```
library(LRTesteR)

# Null is true
set.seed(1)
x <- rpois(100, 1)
poisson_lambda_one_sample(x, 1, "two.sided")

# Null is false
set.seed(1)
x <- rpois(100, 2)
poisson_lambda_one_sample(x, 1, "greater")
```

poisson_lambda_one_way

Test the equality of lambda parameters of poisson distributions.

Description

Test the equality of lambda parameters of poisson distributions.

Usage

```
poisson_lambda_one_way(x, fctr, conf.level = 0.95)
```

Arguments

- | | |
|-------------------------|---|
| <code>x</code> | a numeric vector of at least 50 data values per group. |
| <code>fctr</code> | a factor vector indicating groups. |
| <code>conf.level</code> | overall confidence level of the likelihood intervals. Uses Bonferroni correction. |

Details

- All lambdas are equal. ($\lambda_1 = \lambda_2 \dots \lambda_k$).
- Alternative: At least one lambda is not equal.

Value

An S3 class containing the test statistic, p value, list of likelihood based confidence intervals, overall confidence level, individual confidence level of each interval and alternative hypothesis.

Source

- https://en.wikipedia.org/wiki/Likelihood-ratio_test
- Yudi Pawitan. In All Likelihood. Oxford University Press.

x <- c(rpois(50, 1), rpois(50, 2), rpois(50, 3))
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
poisson_lambda_one_way(x, fctr, .95)

```

print.lrtest*Print results of tests.***Description**

Print results of tests.

Usage

```
## S3 method for class 'lrtest'
print(x, ...)
```

Arguments

x	a test from LRTesteR.
...	arguments passed to other methods.

Examples

```

library(LRTesteR)

set.seed(1)
x <- rnorm(100, 0, 1)
test <- gaussian_mu_one_sample(x, 0, "two.sided")
print(test)

set.seed(1)
x <- rnorm(150, 1, 1)
fctr <- c(rep(1, 50), rep(2, 50), rep(3, 50))
fctr <- factor(fctr, levels = c("1", "2", "3"))
test <- gaussian_mu_one_way(x, fctr, .95)
print(test)

```
